

**BIOZONE**  
SCIENTIFIC INTERNATIONAL

**BioZone Technology Solutions** are used in homes and businesses to improve and disinfect air with added UV Virus protection. The **UV Virus protection** creates systems for **disinfection, sanitation, preventative maintenance and odor control.**

## BioZone AC® system

The BioZone AC air sanitation system removes odors at their source, not by simply masking scents (like a fragrance dispenser). The system disinfects and destroys the sources of odor, including bacteria, viruses, mold, fumes and other impurities in the air and on surfaces. Chemical-free air and surface disinfection is friendly to the environment, creates a pleasant experience, and promotes hygiene continuously, 24/7. Certified BioZone Scientific products are used worldwide to enhance and cleanse living spaces of all kinds.

## PowerZone

This lightweight, portable air and surface purifier can neutralize any odor. The ideal cleaning companion. PowerZone is perfect for vehicle restoration, washrooms, hotels, and other public spaces. Protect washroom users by removing viruses, mold, and fungi. Eliminate odors from cigar and cigarette smoke, fire damage, biological pollutants, mold, and toxic gases. Kill odor-causing airborne and surface bacteria.

## PR Air Purifier

Odor control is a concern for most of the spaces in which we live and work. Protect your family or employees' health by purifying the air they breathe. The PR Series is a family of portable air and surface cleaning systems. Multiple proven technologies clean your air and safeguard your health.

Chemical-free air and surface disinfection is friendly to the environment, creates a pleasant experience, and promotes hygiene continuously, 24/7. These lightweight, portable air and surface purifiers can neutralize any odor. The ideal cleaning companion, each is perfect for offices, homes, healthcare facilities, veterinarian's offices, and hotel rooms.

## PowerZone

**IceZone®** is an air and surface clean-in-place (CIP) system for ice machines. It destroys microbes on every surface that the ice touches in the ice production area, storage bin, and beverage dispenser. Kills flu and other viruses Prevents the formation of slime, mold, and yeast Controls bacteria in hard-to-reach areas that are difficult to clean Works with every type of commercial ice machine Increase your bottom line Reduces regular cleanings and "full cleanings" by staff Lowers number and frequency of repairs Increases ice machine uptime.
