RMA RETURN POLICY

RMA – Returned Product Policy

The following is the policy for Returns from the customer.

1. All returned product must have an RMA number from Customer Service prior to sending the product back.
2. The product must be standard product, still crated and within 90 days from date invoiced. Standard products are defined as product configurations that are saleable to the general market. Custom Products are product configurations that are unique to a specific customer and cannot be sold to other customers. Obsolete/discontinued products cannot be returned.
3. If return is approved for standard product, the standard restock charge is 30% or 20% if a replacement order is made.
4. Custom product is non-returnable.
5. Applicable freight charges and re-creating will be the customer's responsibility.
6. RMA number must be clearly written on all shipping paperwork to factory/warehouse.
7. RMA will be valid for 45 days from date of issue.

*Nugget agitator (020002125 - \$404.89) and Ice Level Management Kit (5028738 - \$723.45) required with nugget ice machine applications.

ITEM DETAILS

- CL Required ice machine lid for top-mounted ice machine applications. Lid covers dispenser manual fill area. (This price is only available for the above (CL) part numbers.)
- SL Required strip lid assembly to top mount an ice machine that is narrower than the dispenser.
- N Required ice deflector to top mount an ice machine.
- IB Required adapter kit to top mount Manitowoc IB Series ice machine on Servend dispenser. NOTE: IB adapter kits may be ordered through either MBE or Manitowoc Ice.

NOTE: When top mounting Servend's Ice/Beverage Dispensers with non-Manitowoc brand ice machines, be sure to check ice machine manufacturer's current product specifications (including ice zone drop areas) to ensure compatibility. Manufacturer's product specifications may change without notice.

NOTE: Contact your Customer Service Representative for Manitowoc Ice Q-Series adapters.

CUP DISPENSERS

CD4U Cup Dispenser

Four cup holder tubes (approx. 12 - 44 oz. cups 3 3/8" - 4 5/8" cup diameter) with high volume lid and straw storage. No special cup tube sizes available. CD4U cup dispensers are either free standing, or they can be mounted to the side of MDH Series Ice/Beverage dispensers via drain pan pin. The maximum foam cup diameter on a CD4U is 3 7/8". The CD4U can accommodate a paper or plastic cup with a maximum diameter of 4 5/8". Single Control Module Kits are compatible with single and dual chute dispensers. Dual Control Module Kits are compatible with dual chute dispensers only (MDH-302 and MDH-402).

CREATING A MULTIPLEX SODA OR CHILLER SYSTEM

The information below will allow you to pick beverage system components to satisfy the majority of your prospective customers. There are three main areas that drive the configuration of a soda system.

1 | TYPE, SIZE AND VALVES FOR THE TOWER OR DISPENSING STATIONS

2 | TYPE, SIZE AND LENGTH OF BEVERAGE CONDUIT

3 | TYPE, SIZE AND STYLE (COOLING) OF BEVERAGE REFRIGERATION OR WATER CHILLER UNIT

1 TOWERS OR DISPENSING STATIONS (PAGES 22-25)

There is a wide variety to select from:

A | Style of Dispensing Station

CREW-SERVE DISPENSING

1. Portion control keyboard.
2. Portion control individual valve covers.
3. Auto fill lever (Foam-over Device).

SELF-SERVE DISPENSING

1. Lever attached.
2. Push button activated.
3. Ice or Ice/Beverage dispenser.

B | What type of valve is required?

- E = Eaton/Wilshire FFV
- L = Lancer/Coca-Cola
- F = Flomatic/Pepsi
- C = Cornelius/Pepsi

2 CONDUIT SELECTION (PAGES 26-28)

SODA CONDUIT:

A | Select insulated conduit by number of lines needed.

1. Number of syrup flavors desired.
2. One plain water for non-carbs and/or water.
3. Two carbonated water lines for Models 28 and 11 ($\frac{3}{8}$ " (1 cm) lines required)
4. Two carbonated water lines for Model 42 and Icecore 44G ($\frac{1}{2}$ " (1.3 cm) lines required)
5. Four carbonated water lines for Icecore 50G ($\frac{1}{2}$ " (1.3 cm) lines for both syrup and water are recommended).

B | Select non-insulated conduit by number of lines needed.

C | Measure the distance to the closest dispenser and add the distance from that dispenser to all other dispensing stations and add 20 feet (for rise and fall) to obtain your conduit run length.

PRE-CHILLER CONDUIT:

A | Select conduit by number of lines needed.

1. Plain water and carbonated lines required.
2. Insulated or non-insulated conduit required.
3. Measure the distance to the refrigeration unit to be supported and select conduit.

3 SODA REFRIGERATION UNIT (PAGES 29-31)

Selection is based on syrup volume and Towers / Dispensing Stations required. (Use "Quick Pick Selection Chart" pg. 5).

A | Find number of Dispensing Stations.

B | Find the closest business level syrup usage expected.

C | Where the column chosen intersects the business level row you will find the unit required and a maximum conduit length. If your length exceeds the Maximum, go to the right and down (if necessary) until you have found a match for your requirement.

NOTE: Models 2803 and 11 available in air. Icecore 44G and 50G available in air, water and remote cooled. Base your decision on store requirement or preference.

NOTE: See notes below chart referring to climate (75oF / 24oC). Higher than rated ambient temperatures will require you to go to the next larger size Soda Unit or to add a water chiller to reduce incoming water temperatures.

NOTE: One Syrup Coil is required per flavor (see additional coil part numbers listed after Soda refrigeration units).

CHILLER REFRIGERATION UNIT Selection is based on three applications: (Use Chiller Selection Chart pg. 6).

A | Remote Recirculation Soda Factory is too small for the application due to incoming water temperature or volume is higher than anticipated.

1. Refer to Chilled Water to Multiplex Soda Factory Unit Applications section in the Chiller Selection Chart pg. 6.
2. Find Soda unit row and move to the right until you see 100%.
3. Find the Water Chiller for your situation.

NOTE: The Model SC340 is capable of reducing incoming water temperatures for all Multiplex Soda units listed. The SC1000 and SC2000 units would be used to Pre-Chill water to multiple Soda Factory Units as shown in the "Max Soda Units Supported" row.

B | Restaurant/Outlet is unwilling or unable to add additional ice making capacity for a **Coldplate Soda Dispenser**.

1. Refer to Chilled Water or Soda to Coldplate Applications section in the Chiller Selection Chart pg. 6.
2. Find capacity row and move to the right until you see the number of 12 oz drinks per minute you will need to support.
3. Find the Water Chiller for your situation.

C | **Bakery or General application** has a requirement for chilled water.

1. Refer to Bakery Applications section in the Chiller Selection Chart pg. 6.
2. Find capacity row and move to the right until you see the numbers of pounds of water required per hour or gallons of water per hour needed to support the process.
3. Find the Water Chiller for your situation.

NOTE: The SC Water Chiller line reduces incoming water temperature from 90oF to 40oF (32.2oC to 4.4oC) at the ratings listed. If the ambient incoming water temperatures are less than 90oF (32.2oC) you will have a proportionate excess of capacity.

4 STAND OR WALL MOUNT RACK (PAGE 33)

Stand or Wall Mount Rack selection is based on the Soda refrigeration units used and by syrup tank or Bag-In-Box syrup storage required.

5 AIR/CO2 CONTROL PANELS AND WATER CONTROLS

Air/CO2 Control Panels and Water Controls are selected based on the use of syrup tanks or Bag-In-Box syrup supplies.

6 BAG-IN-BOX PUMPS (PAGES 34)

A | Minimum one pump per flavor.

B | Fittings required by particular customers.

1. QCD Fittings are used for General line syrups.
2. Coke (Red) fittings are required for Coca-Cola products.
3. **Encore Fittings** are used for Pepsi line syrups.

7 TEE KITS, ADAPTER KITS, INSTALLATION ACCESSORIES AND SUPPORT EQUIPMENT (PAGES 28,32,35)

A | How to choose the Tee Kit, Adapter Kit and Installation Accessories required.

1. Check Conduit ordered in step two for tubing sizes included and pick tee fitting kit which matches internal conduit tubing diameters.
2. Add additional adapter kits as necessary (splicers).

NOTE: Number of Conduit Tee Fitting kits required (number of towers or dispensing stations minus one = the number of tee kits required) - model 2803 and 11 have 3/8" water and 1/4" syrup fittings.

3. Select optional conduit straps for in-ceiling installation of conduit.
4. Select optional conduit shrouds to hide conduit in kitchen or customer areas from the ceiling to the counter.

B | Water Boosters are used when incoming water pressures fall below the 40 PSI minimum requirement at any operational time of the day (Proper ratio of the finished beverage is the issue here).

C | **Air Compressors** are used to push tank or Bag-In-Box syrups from the back room to the soda refrigeration unit and eventually to the tower or dispensing station rather than using purchased CO2 gas. (Long term savings of CO2 gas and the ability to serve plain water drinks when the outlet is out of CO2 gas are the benefits.

D | **Remote Condensers** are installed on rooftops or away from the work area and used with remote cooled refrigeration units as a means of venting all the hot air exhausted by the refrigeration compressor. This method is especially beneficial in warm climates where excessive heat or air conditioning loads are not desirable.

E | **Refrigerant Pre-Charged Line Sets** are used to connect the remote soda refrigeration unit to the remote condensers.

NOTE: Measure the run length from refrigeration unit to condenser location (normal allowed elevation without P-trap is 25 feet - if P-trap required, add five feet to refrigerant line length).

REFRIGERATION UNIT "QUICK-PICK" SELECTION CHART

NUMBER OF DISPENSING STATIONS				
BUSINESS LEVEL *	1	2	3	4
Up to 6 gal (3 L) of syrup/day or 280 drinks/day (2,000 gal/yr)	MODEL 2803 40 ft (12 m) Maximum Conduit Length	MODEL 11M 100 ft (30 m) Maximum Conduit Length	ICECORE 44G 250 ft (80 m) Maximum Conduit Length	ICECORE 44G 250 ft (80 m) Maximum Conduit Length
Up to 12 gal (45 L) of syrup/day or 560 drinks/day (4,000 gal/year)	MODEL 11M 100 ft (30 m) Maximum Conduit Length	MODEL 11M 100 ft (30 m) Maximum Conduit Length	ICECORE 44G 250 ft (80 m) Maximum Conduit Length	ICECORE 44G 250 ft (80 m) Maximum Conduit Length
Up to 21 gal (79 L) of syrup/day or 980 drinks/day (7,500 gal/year)	ICECORE 44G 250 ft (80 m) Maximum Conduit Length	ICECORE 44G 250 ft (80 m) Maximum Conduit Length	ICECORE 44G 250 ft (80 m) Maximum Conduit Length	ICECORE 44G 250 ft (80 m) Maximum Conduit Length
Up to 32 gal (121 L) of syrup/day or 1,400 drinks/day (11,500 gal/yr)	ICECORE 44G 250 ft (80 m) Maximum Conduit Length	ICECORE 44G 250 ft (80 m) Maximum Conduit Length	ICECORE 50G 350 ft (107 m) Maximum Conduit Length	ICECORE 50G 350 ft (107 m) Maximum Conduit Length
Up to 42 gal (159 L) of syrup/day or 2,000 drinks/day (15,000 gal/yr)	ICECORE 50G 350 ft (107 m) Maximum Conduit Length	ICECORE 50G 350 ft (107 m) Maximum Conduit Length	ICECORE 50G 350 ft (107 m) Maximum Conduit Length	ICECORE 50G 350 ft (107 m) Maximum Conduit Length

*Care must be taken when selecting the proper refrigeration unit. Above selections are for 75°F (24°C) conditions, 16 ounce (470 ml) drinks, and average business cycles. Other factors such as lunch or dinner peak periods, large drinks, or high ambient conditions may require the next larger size unit. Contact your Welbilt authorized distributor for more information.

CHILLER SELECTION CHARTS

Application Details

CHILLER MODEL NUMBER				
	SC180	SC340	SC1000	SC2000
Evaporator Rating (BTUH)	3060	4250	7400	14900
Cabinet Heat Gain (BTUH)	260	361	710	925
Ice Bank Weight (Lb. Avg.)	26.5	50	100	175

Chilled Water to Multiplex Soda Unit Applications

Chiller working at Inlet 90oF (32.2oC) and Outlet 75oF (23.8oC) for 2 hours

CHILLER MODEL NUMBER

PRODUCT INFORMATION

- EcoBlend® technology featuring the next generation of blending in a cup, which reduces water and product waste.
- Integrated nugget ice maker
- Integrated refrigerated product storage
- 45 drinks/hour
- Intuitive 21.5" touch screen UI
- High performance single blade
- Automated cup shuttle
- Volumetric pump system for improved product consistency and product waste
- Clean in place sanitation system
- Wireless ready
- ADA compliance panel controls
- Locking front casters
- Cloud control and machine monitoring
- Network or USB software update ability

PRODUCT INFORMATION

- Allows for both still drinks and nitrogenated drinks to be poured from a common source (keg) with its patented in-line nitrogenerator, reducing product cost and time (kegs can take up to 14 hours to nitrogenate by traditional infusion methods)
- Nitro dispense creates a true "Theater of the Pour" with a soft, frothy head and a waterfall effect that fascinates customers and drives higher ticket purchases.
- A fully integrated, standalone system requiring just a source of food-grade nitrogen and the beverage you wish to dispense. The refrigerated base insures that product is kept below 41° F for a cool, consistent pour.
- This unit isn't just about coffee! All kinds of beverages, from teas to juices can be infused with nitrogen for a delicious, unique experience that customers will share online with friends.
- 2 taps, drip pan
